

AF1 - STRIKE ONE

2022 CATALOGUE

LOCKING BLOCK SYSTEM™

The semiautomatic pistol Arsenal Firearms AF1 comes as a truly revolutionary gun. The heart of the operating system enters the international, 120 years long specific industry designing and production history with a completely new locking system between barrel and slide-bolt, thanks to which a whole new functionality is granted to the pistol and to the end user. This patented locking system falls under the geometric and stable category of locking systems, but at the same time configures the gun as an in-line operating barrel system.

BLACK/NICKEL SLIDE
ADJ REAR SIGHT
(compat. GLOCK)

STRIKE ONE «tartaruga»

STRIKE 1

The material of the frame is made from a solid aluminum alloy (Ergal 7075) and subsequently nickel-plated.

Slide, magazine release bottom and trigger "turtle finished", make this weapon an elegant object, keeping its technical performance intact.

The traditional coloring of these details called "tartarugato", is obtained from a historical hardening process, and can be performed only on parts produced with low carbon content steels.

The advantage of this procedure is that the parts are treated with mixtures of wood, bones and charcoal, guaranteeing a low risk of deformation and creating a surface layer resistant to corrosion and abrasion.

In this way the core of the soft steel is maintained, eliminating possible breakages caused by dynamic pressure and stress during the firing process.

The conspicuous layer of iron oxide gives the steel the particular aesthetic effect of the cloud-shaped color (brown, blue, red, yellow) that is created during the process of tempering in water.

A special paint (similar to a glass) protects the surface by providing greater strength and a characteristic glossy finish.

STRIKE ONE SPEED *ER GAL*

STRIKE ONE SPEED ERGAL 9 / .40 S&W
SPEED ERGAL 7075 ALLOY GRIP MADE
FROM SOLID, VARIOUS COLORS, TITAN OR
BLACK FINISHED SLIDE
